Guest Access

Hotspot Guest Access Controller

The Hotspot Guest Access Controller is a dedicated appliance, powered by the MikroTik RouterOS routing engine, and customised by Teleostec to support guest access and hotspot requirements.

Ideal for locations requiring reliable and scalable guest access control, with high performance hardware allowing greater throughput and stability. It allows advanced voucher control of usage through time and data volume, plus control of simultaneous-users, and voucher shelf-life. Customisable voucher printing, session logging & reporting, and multi user-profile management is also supported.

As with Basic Guest Access, a second separate and private secure network is supported which also provides access to the overall system management. An option for web filtering and caching is also available (with intrusion detection (IDS) coming soon).

24/7 Pro-active Remote Monitoring

The Guest Access controllers include an advanced embedded monitoring capability. This enables real time monitoring and reporting on the key components in your the solution.

Monitoring can be accessed locally on the gateway controller and is also monitored remotely on a 24/7 basis at our operations centre.

Guest Access Modes:

Flexible configuration for your gateway to meet your requirements:

- **Free Access** - Unlimited access for all users, this displays a web landing page with disclaimer.
- **Voucher Access** - Create vouchers with unique password access for each user, and allow a time limit and/or data volume limit plus voucher shelf life & simultaneous usage.
- **Secure Access** - Integrated security with advanced encryption and authentication.

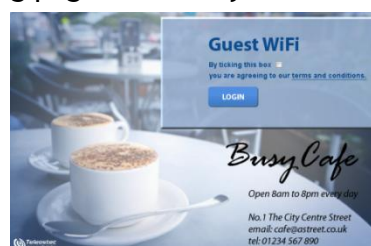

Professional Survey and Installation

Full coverage analysis of the required coverage will ensure we place all wifi access points in the optimum locations. Our design will ensure efficient IP data network connectivity including, where needed, Layer 2 and Layer 3 switching and routing, firewall and security configuration and efficient internet access. The WiFi points will also be placed for optimum WiFi signal coverage, and the final system will be fully tested. The solution will be integrated it any existing equipment, PCs, router or network which you may already have on-site. Where required training is also provided.

Customised Landing Page and Disclaimer

Every guest user will receive the guest landing page when they first use the service to enable them log onto the service and view the disclaimer.

We will customise the user landing page to your requirements using our standard templates. This is an ideal chance to display any branding, and show any promotional details or provide general

Teleostec also offers:

Enterprise WLAN: Larger venues and office spaces require a greater degree of flexibility, reliability, management and integration into other systems. Teleostec Enterprise solutions provide centralised WiFi access point control of larger deployments of WiFi access points, enabling cost effective high capacity and high performance.

Teleostec Broadband Packages: Teleostec provides a range of cost effective business ADSL and Fibre Broadband packages available on a stand-alone basis, or at a discount when combined with a Guest Access gateway allowing you to use your connection for your business and guests. Further discounts available for annual payments.
