*The new low cost  
guest access WiFi  
hotspot*

## Share your internet connection with guests & visitors

### Teleostec Guest Access

- Enables you to concentrate on your business and not worry about your guest access.
- Two separate networks included: Guest Access and separate secure Private Network.
- No contract tie-in or ongoing payments required, and no revenue share needed.

#### Attract More Customers to your Location:

Guest access is controlled with a dedicated network guest gateway appliance:

- Cost effective, small size, low power, ideal guest access or 'hotspot' solution for small to medium locations.
- Flexible, expandable and future proof solution.
- One wifi network for Guest Access PLUS one for Private Access. Data traffic between networks is kept isolated for privacy. Private Access is protected with a security password.

#### Simple to use:

- Can be used for both wireless and/or wired access.
- WiFi 802.11a,b & g and 802.11n supported.
- Integral antenna and 5x Gigabit data ethernet ports.
- No software installation.
- Works with laptops and mobiles.
- 12 month Return To Base (RTB) Warranty.
- Easily expanded to increase WiFi coverage.

Teleostec Ltd. Sheraton House, Castle Park, Cambridge. CB3 0AX.

## Gateway Features:

Guest access is controlled with a dedicated gateway appliance:

- Landing page (with site name) and disclaimer is displayed to all users. Users must acknowledge the disclaimer before proceeding.
- Two networks supported: one network for Guest Access, one for Private Access (protected with a secure password).
- Wireless Access Point integrated into the gateway.
- 5x Gigabit data ethernet ports for wired connection of the private network and expansion ports to add more Access Points.

## Basic Guest Access

The Basic Guest Access solution from Teleostec comprises low cost, easy-to-use and effective integrated network device, powered by the MikroTik RouterOS routing engine, and custom configured by Teleostec to support guest access requirements. It's a proven, stable and reliable platform, which draws very low power, and is flexible, expandable and future proof.

The Basic Guest Access solution provides an ideal guest access or 'hotspot' solution for small to medium locations. It includes an integrated wireless access point and supports two networks; one for guests, the other is a private secure network for your own use. It provides a guest landing page and a disclaimer for additional protection.

## Professional Installation Available

We recommend that you use our professional installation service to ensure the most effective set-up:

- Installation benefits include a customised landing page for your site, 12 months remote monitoring, and 12 months priority telephone support.
- You will need your own broadband router with an available data port on the LAN side. Alternatively we can supply a new router, and we also provide very cost effective broadband packages.
- Attending an installation also means we can integrate the solution into any existing equipment, PCs, router or network which you may already have on-site.
- We will also set-up our automatic 24/7/365 pro-active monitoring of your system. This allows us to detect and act on any issues quickly and effectively, and can allow remote access to fault find and fix any problems immediately.

## Landing Page and Disclaimer

- Every guest user will receive the guest landing page when they first use the service to enable them log onto the service and view your usage disclaimer.
- We can customise the landing page to your requirements using our standard templates if you opt for our professional installation. This is an ideal chance to display any branding, and show any promotional details or provide general information.

(example customised landing pages available with professional installation service)
